

Public attitudes towards ocean protection and fishing practices in the EU

Prepared for

 **OCEANA**

 **SEAS AT RISK**

1. Background & research design

Background

Sapience is a Brussels-based independent research and consultancy agency and spin-off of the Vrije Universiteit Brussel (VUB), specialising in psychological and behavioural research. The Sapience team has extensive expertise in employing various research methods to understand, predict, and influence human behaviour.

In February 2024, Sapience was commissioned by Oceana and Seas at Risk to carry out EU-wide research to gather quantitative information concerning the **public attitudes towards ocean protection and fishing practices** in the EU.

Objectives

The present research aims to investigate public opinion regarding the importance of protecting the oceans and marine ecosystems, as well as the public perception of **Marine Protected Areas (MPAs)** and fishing practices. Specifically, the current study explores four main research questions:

- 1 Do **EU citizens care about the ocean**, have a strong relationship with it, and are concerned about its health?
- 2 Do they agree that marine protection and **MPAs are helpful and necessary tools** to safeguard the ocean, along with marine life and habitats?
- 3 Do they believe that, to offer this protection, **bottom trawling should not be allowed** inside MPAs?
- 4 Do they believe that the **EU political leaders should prioritize** addressing ocean issues as part of their mandate?

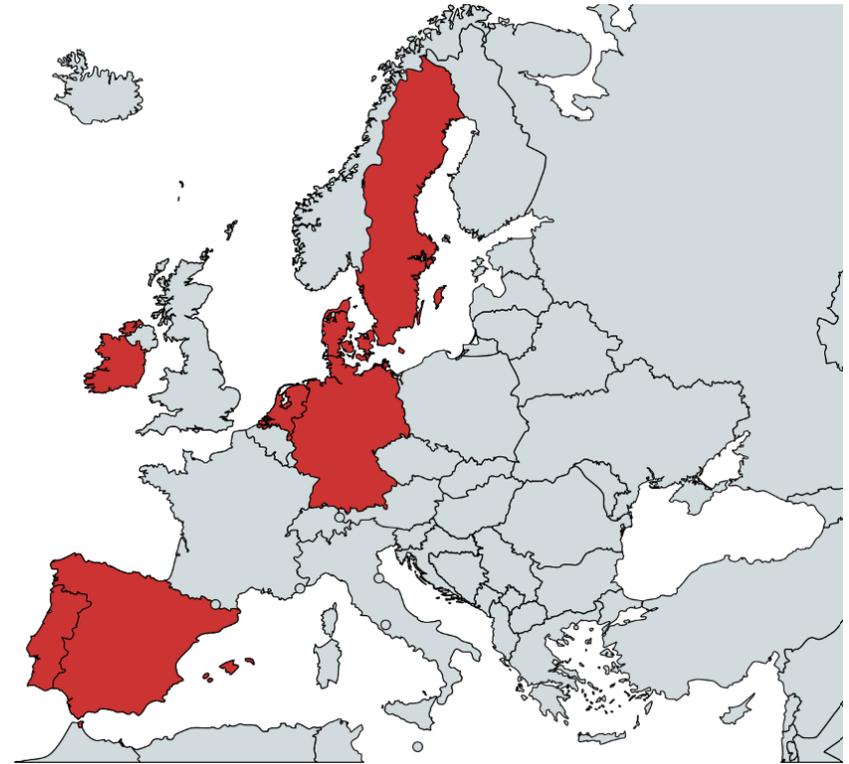

Research design & sample

To address the research questions, an **online survey** lasting approximately 6 minutes was developed. It garnered responses from a total of 7 013 participants across 7 selected countries. The survey was conducted from April 18th to April 25th, 2024.

To ensure **statistical reliability and representativeness**, a minimum of 1,000 respondents per country were included. Data were weighted within each country to achieve national representation across age, gender, and region.

This report will present the **findings from all surveyed countries**. A comprehensive breakdown of the overall sample provided in the appendix.

The 7 countries included: Sweden, Denmark, Ireland, Netherlands, Spain, Portugal & Germany

Questionnaire

The questionnaire consisted of the following **topics**:

- Background
- Perceived importance and knowledge of MPAs
- Awareness & knowledge of bottom trawling
- Opinion on MPAs and bottom trawling
- Drivers and barriers
- Sociodemographics & profiling

2. Results

Key insights

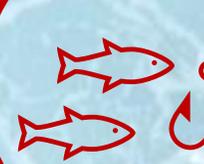

90%

believe MPAs are essential for preserving marine biodiversity

9 out of 10

citizens in the EU think protecting ocean and marine ecosystems is very important

73%

would support a ban on bottom trawling in MPAs

86%

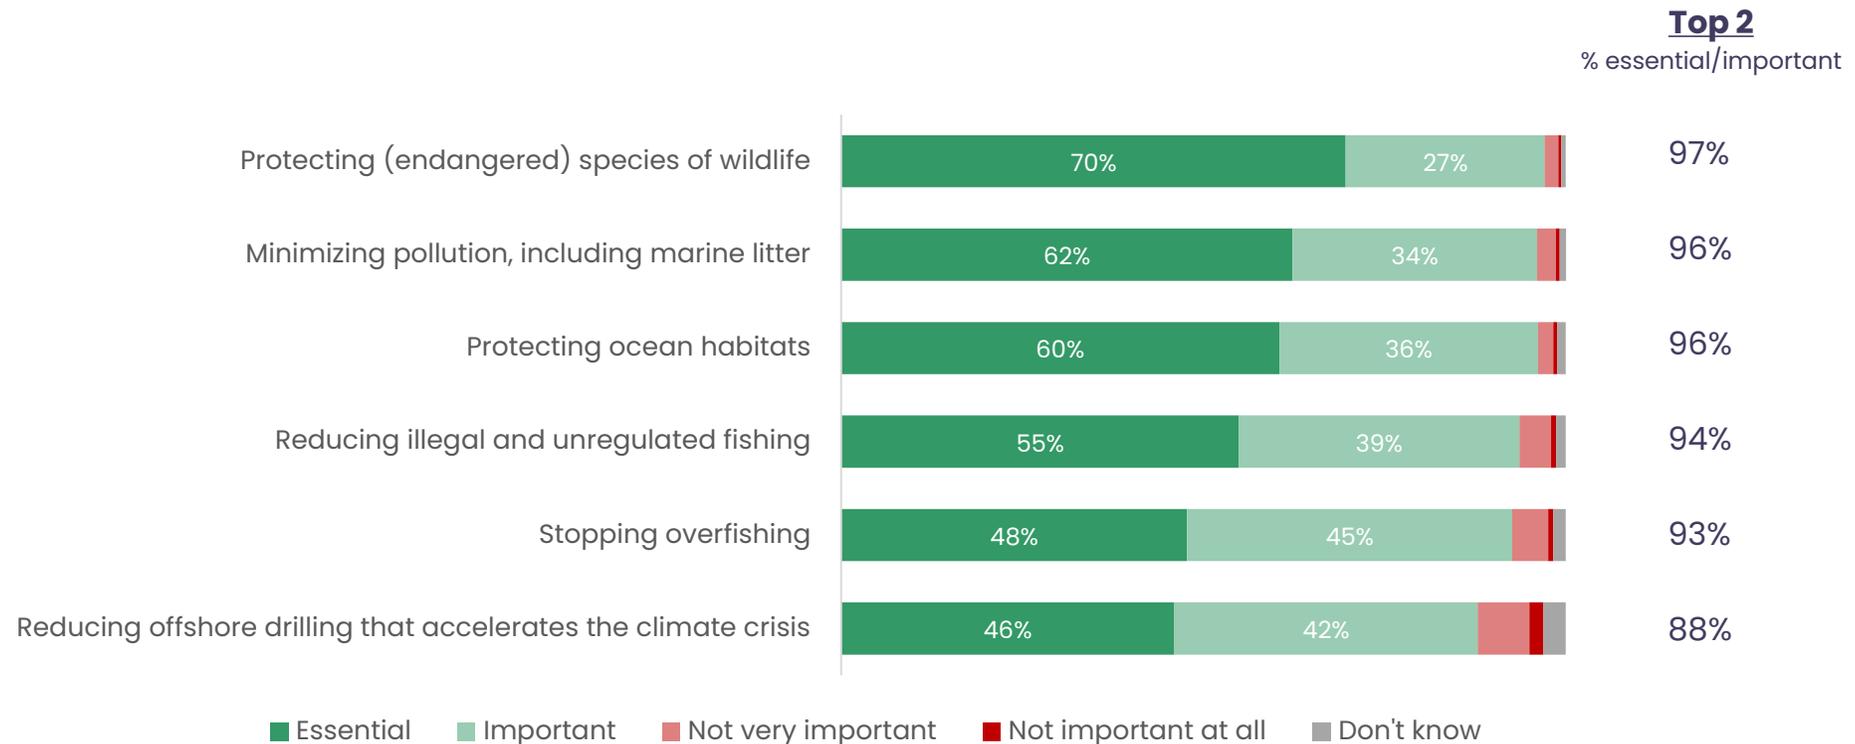

expect political leaders to give higher priority to the protection of marine biodiversity

2.1 Perceived importance of the ocean & marine ecosystems

Why do citizens believe it is important to protect the ocean and the marine ecosystems?

“Q: How important, or otherwise, do you believe it is to protect the ocean and the marine ecosystems in the following ways?”

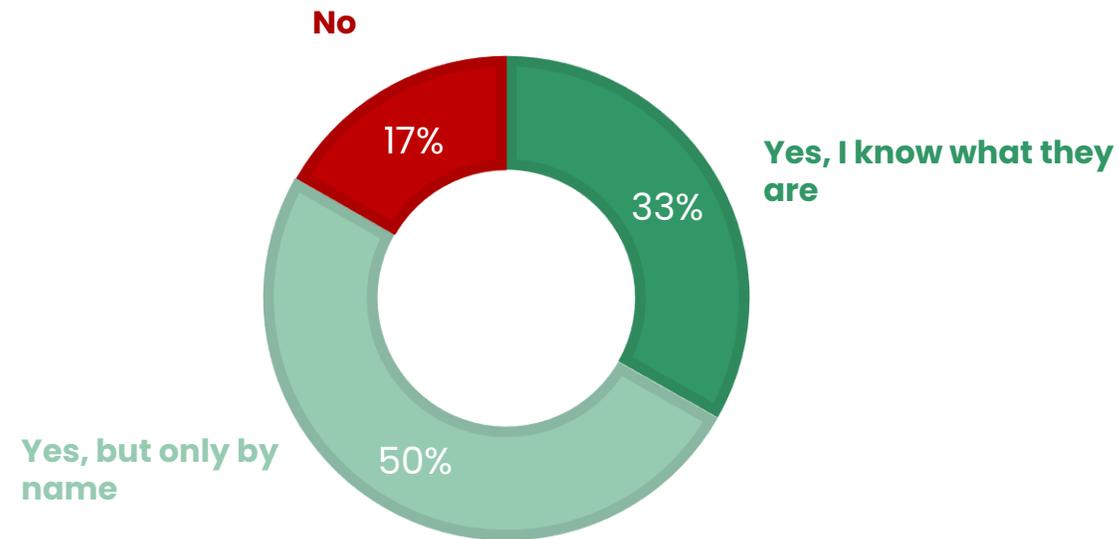

Base: total sample (n=7 013)

2.2 Public perception of Marine Protected Areas (MPAs)

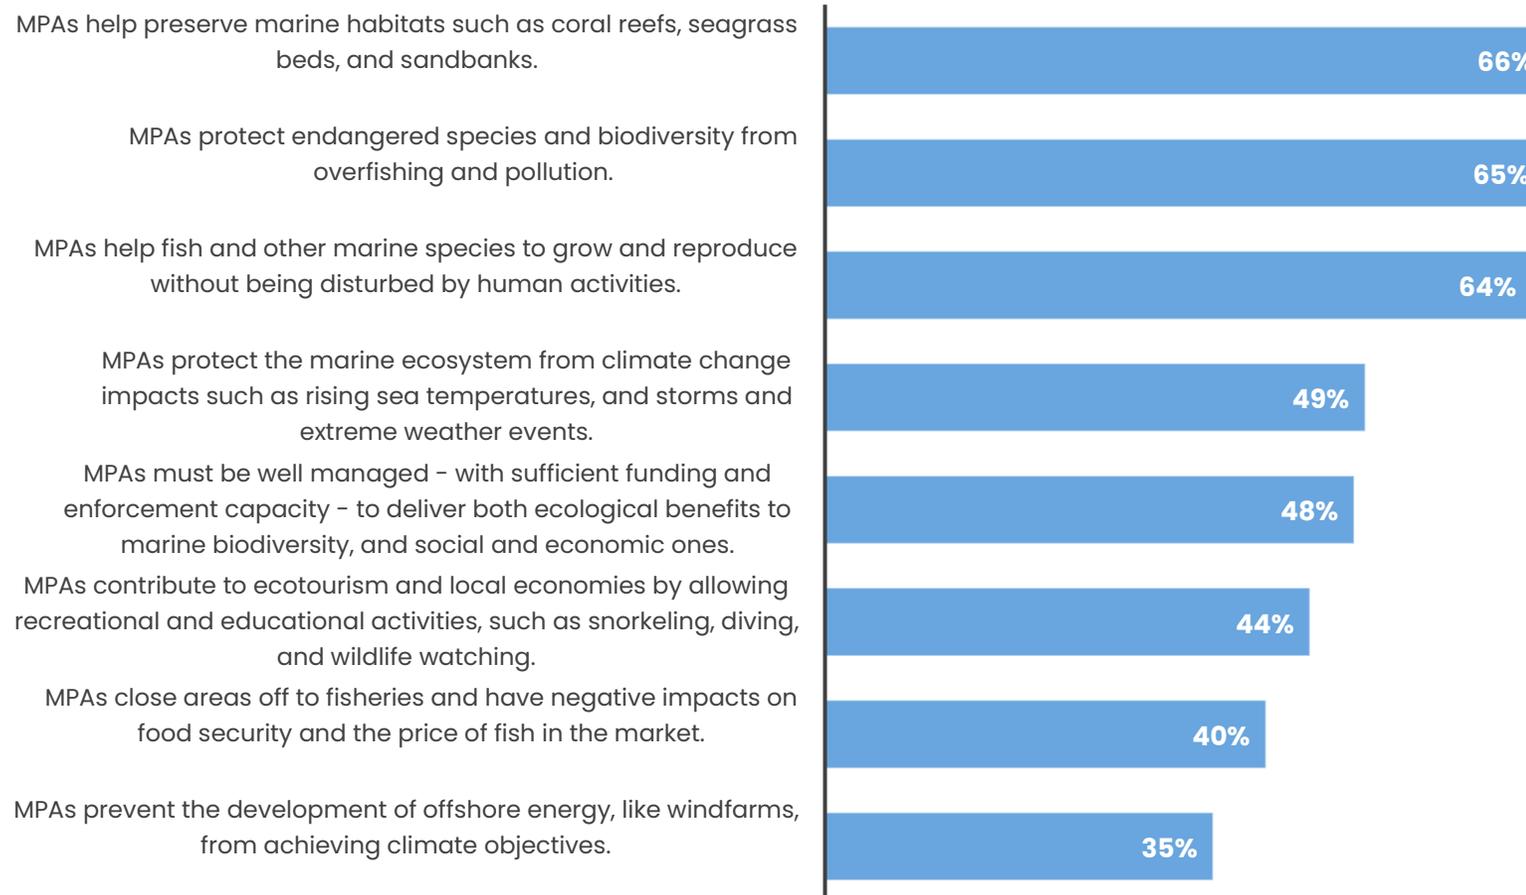

How much do citizens know about Marine Protected Areas?

"Q: Have you already heard of Marine Protected Areas?"

How much do citizens know about Marine Protected Areas?

“Q: Below you can find some arguments for and against Marine Protected Areas (MPAs). In each case, please indicate whether you have heard this information or not.”

How necessary to the citizens believe MPAs are to conserve marine biodiversity?

"Q: How necessary do you think Marine Protected Areas are to conserve marine biodiversity?" *

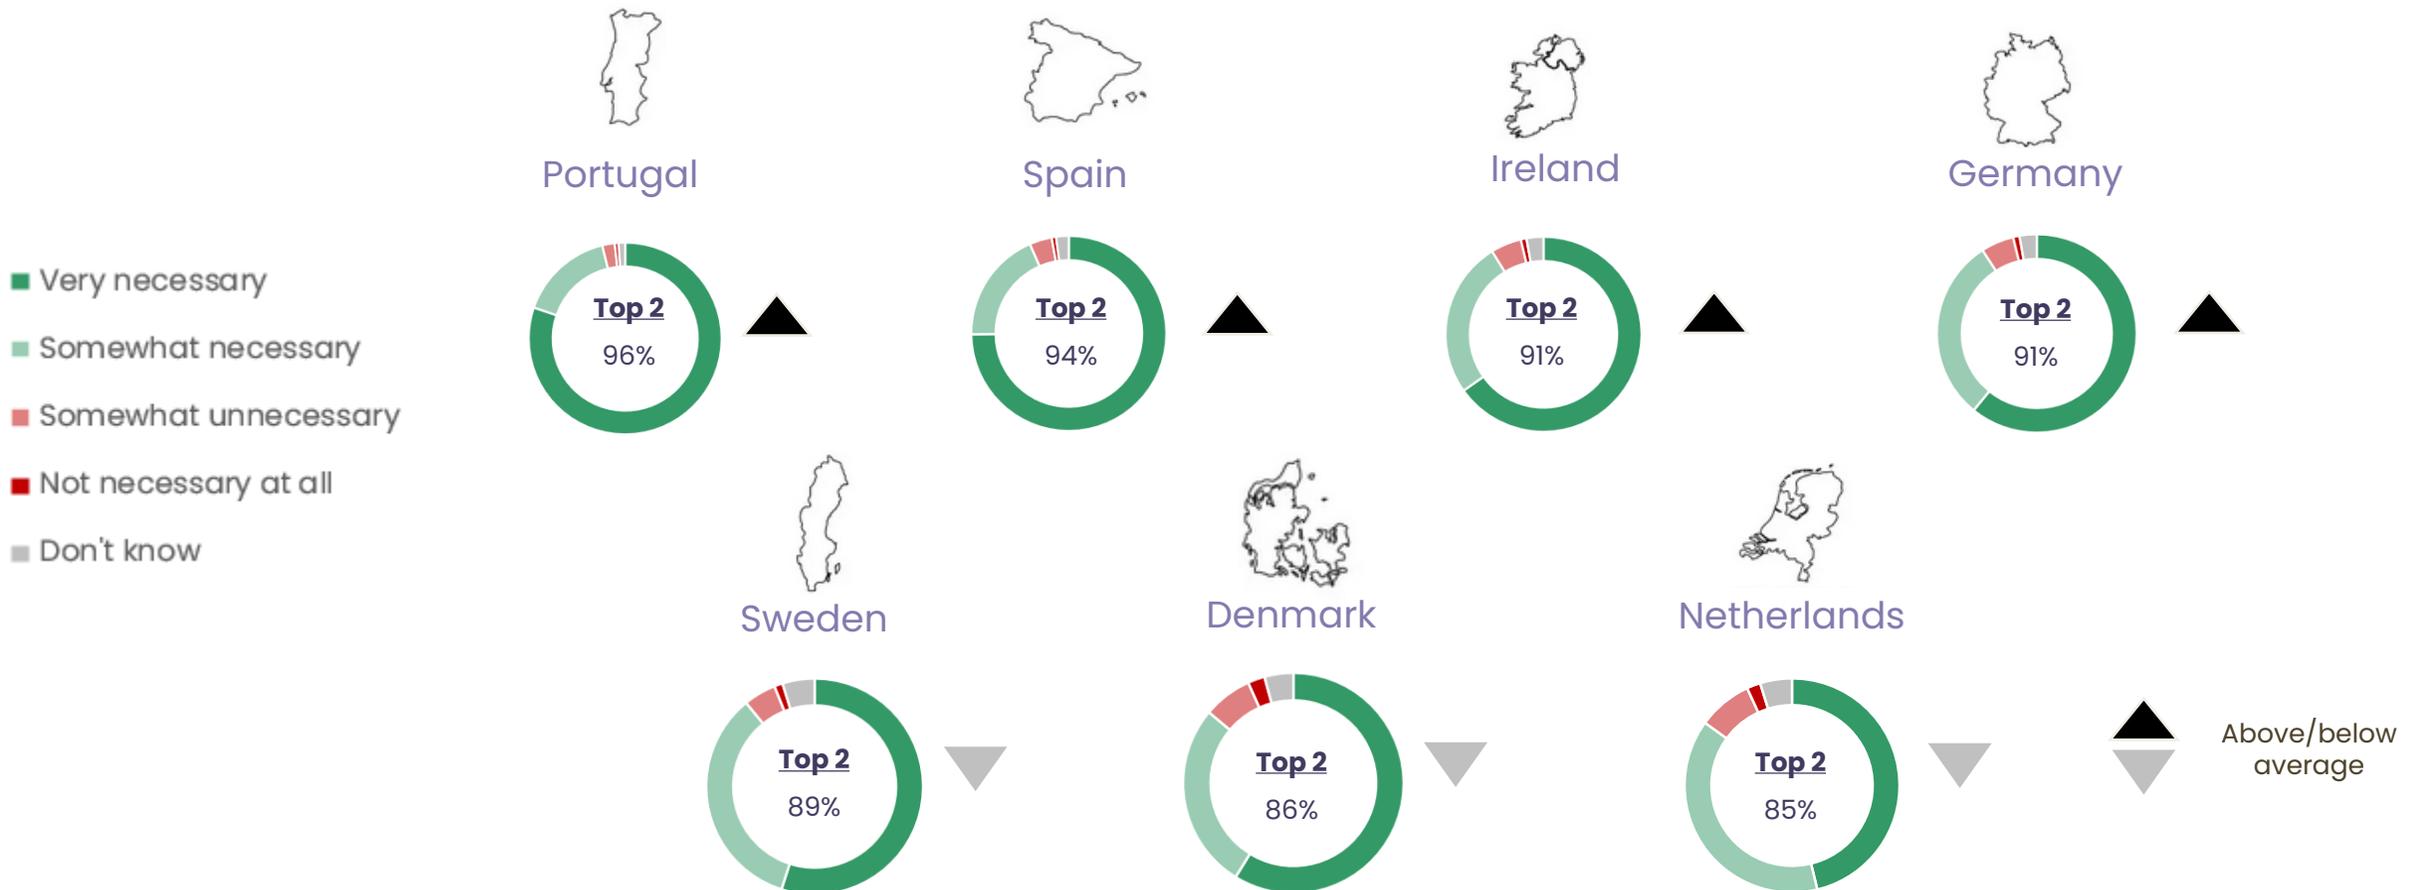

*

Respondents who answered 'No' to Q: "Have you already heard of Marine Protected Areas? Were given specific information about Marine Protected Areas."

How necessary do the citizens in different countries believe MPAs are to conserve marine biodiversity?

“Q: How necessary do you think Marine Protected Areas are to conserve marine biodiversity?”

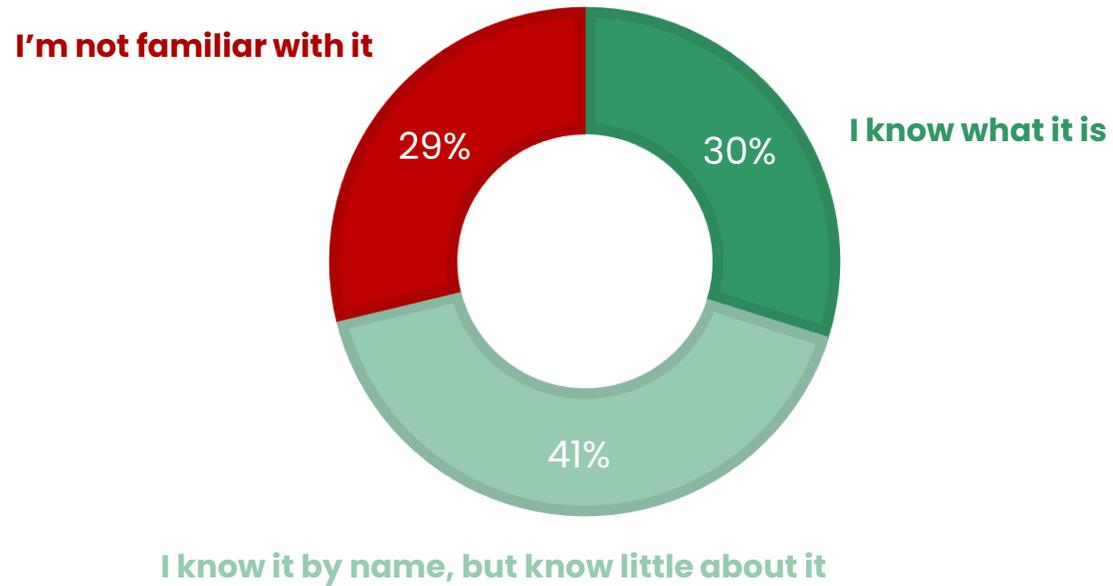

Base: total sample (n=7 013)

2.3. Public opinion on bottom trawling

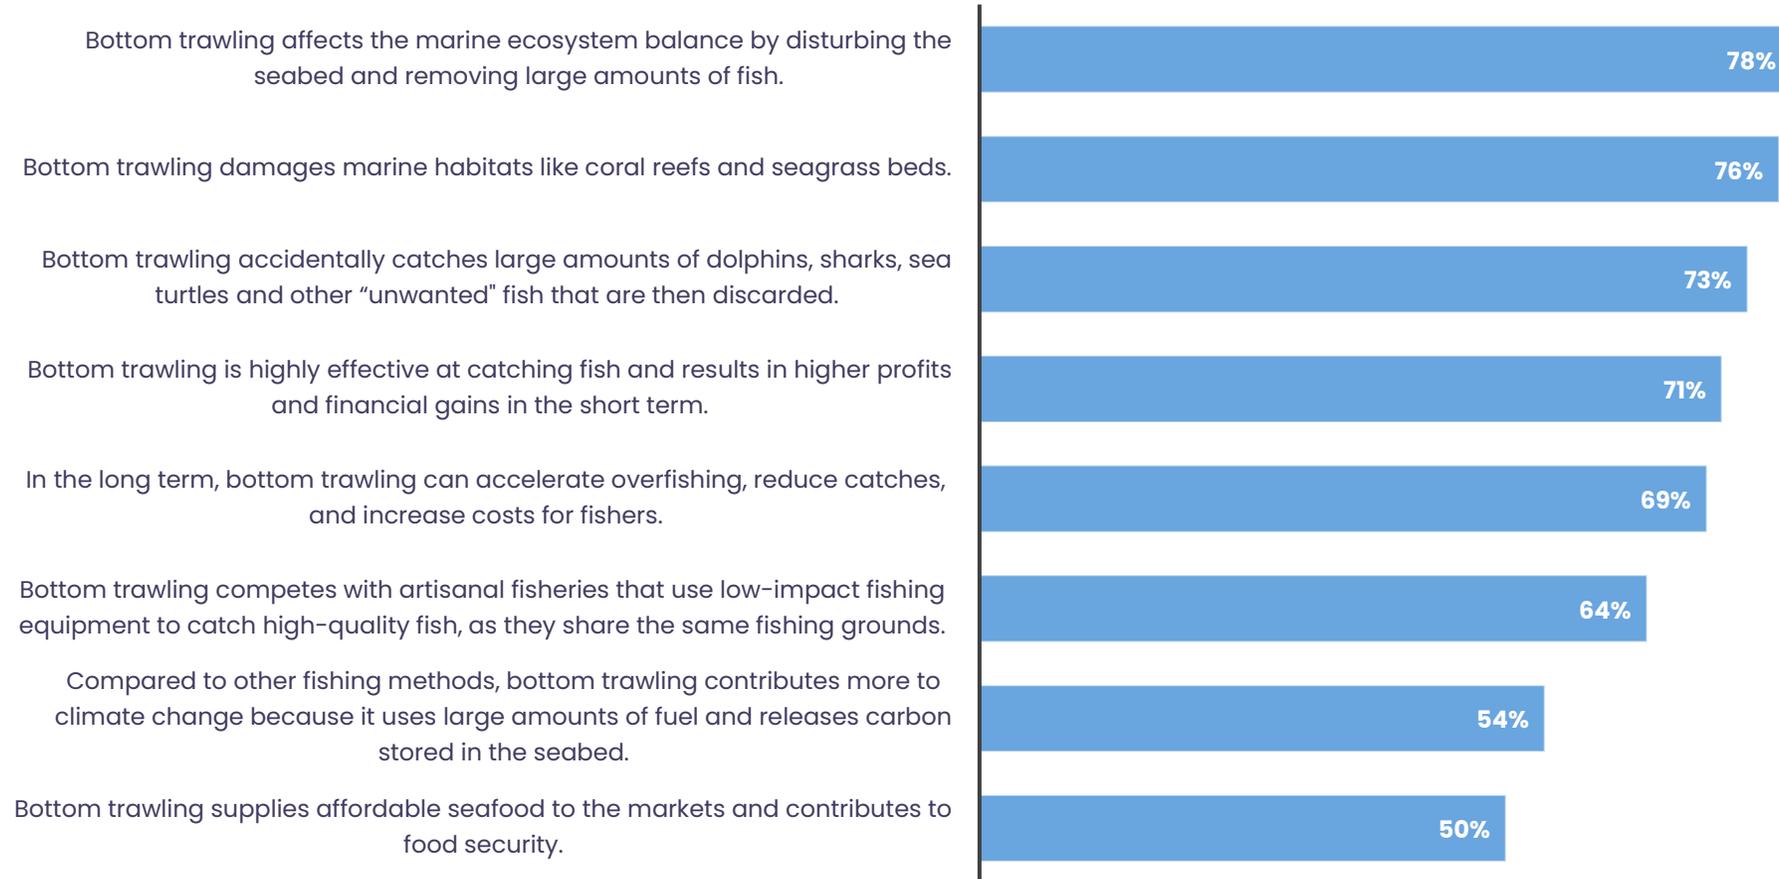

How much do citizens know about bottom trawling?

"Q: How familiar are you with the fishing practice known as bottom trawling?"

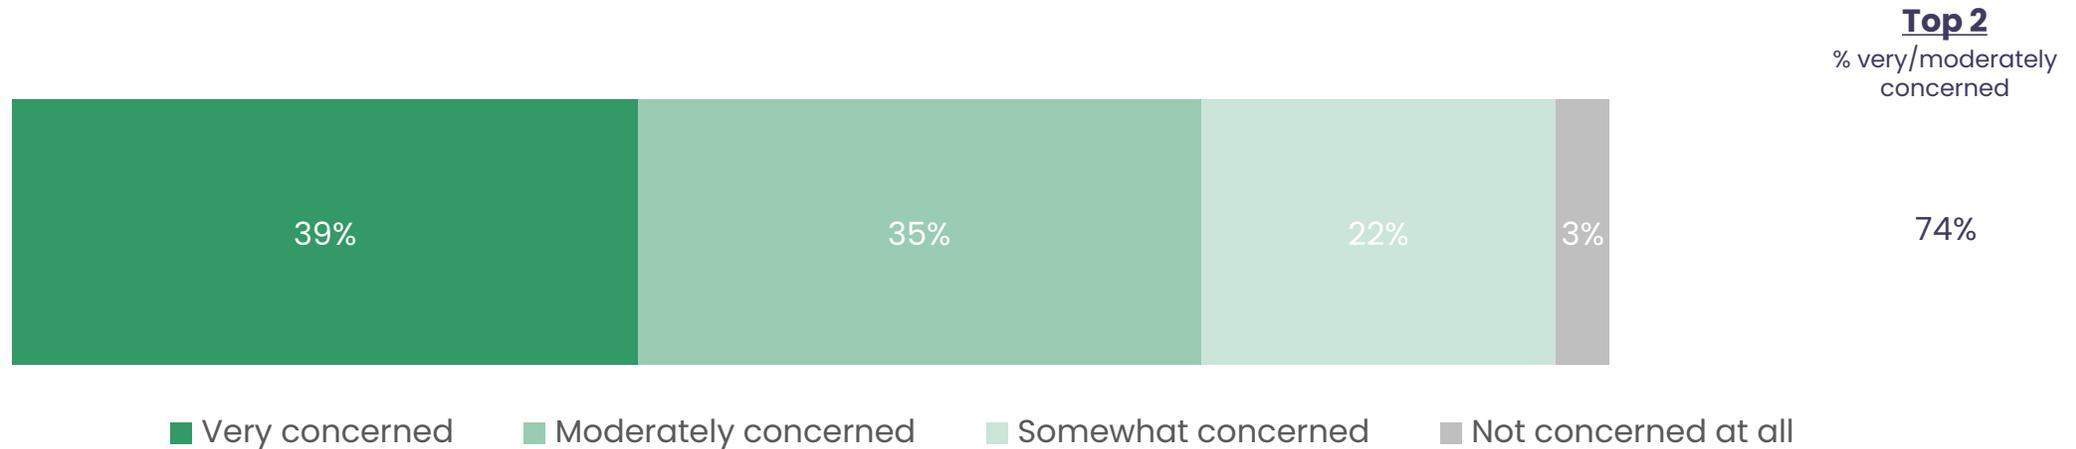

How much do citizens know about bottom trawling?

“Q: Below you can find some arguments for and against bottom trawling. In each case, please indicate whether you have heard this information or not.”

Are citizens concerned about the impact of bottom trawling?

"Q: How concerned are you about the environmental impact of bottom trawling on marine ecosystems?" *

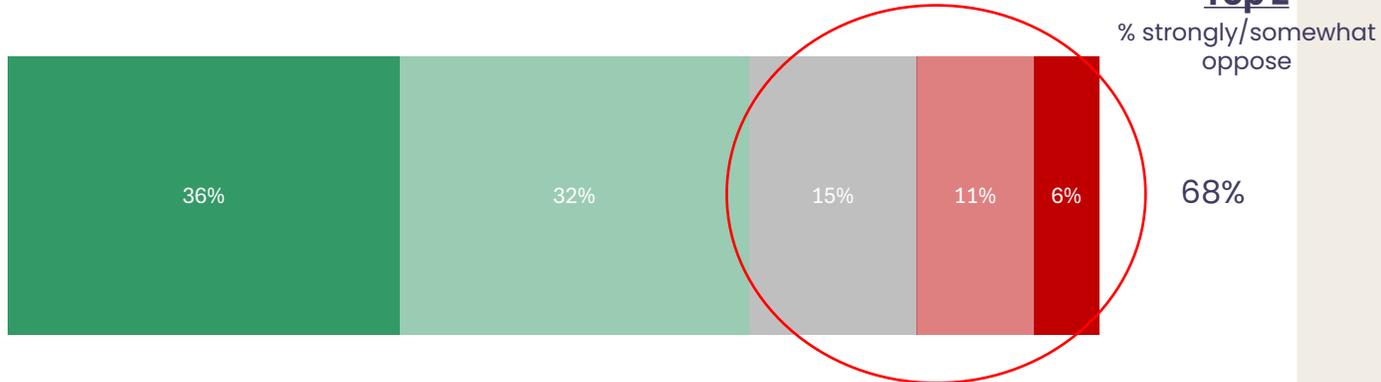

*

Respondents who answered 'No' to "Q: How familiar are you with the fishing practice known as bottom trawling?" were given specific information about bottom trawling.

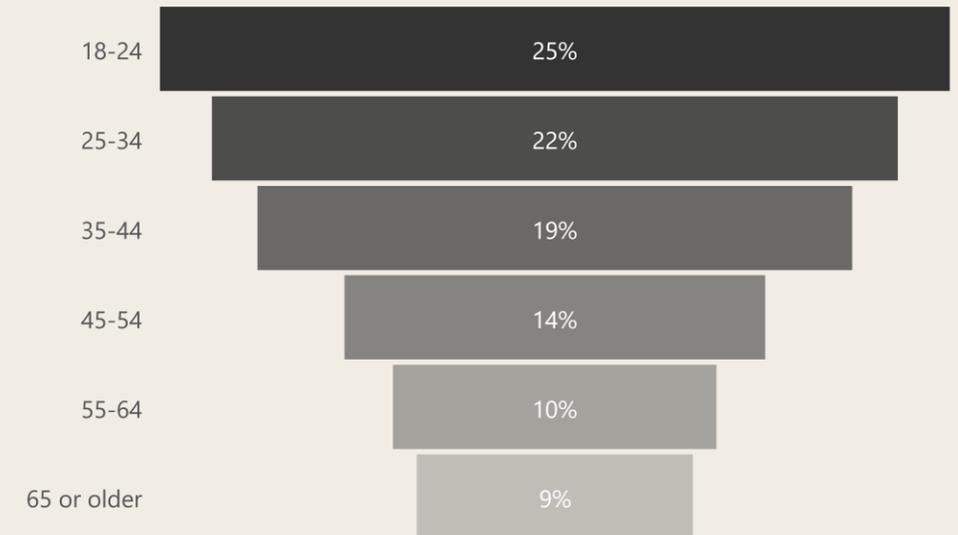

Which citizens oppose or support bottom trawling?

"Q: Which of the following best describes your opinion on bottom trawling as a fishing practice?"

- I strongly oppose it
- I somewhat oppose it
- I am indifferent
- I am somewhat supportive of it
- I am very supportive of it

What is the age of those who support or are indifferent to bottom trawling?

Do citizens in the different countries oppose or support bottom trawling?

"Q: Which of the following best describes your opinion on bottom trawling as a fishing practice?"

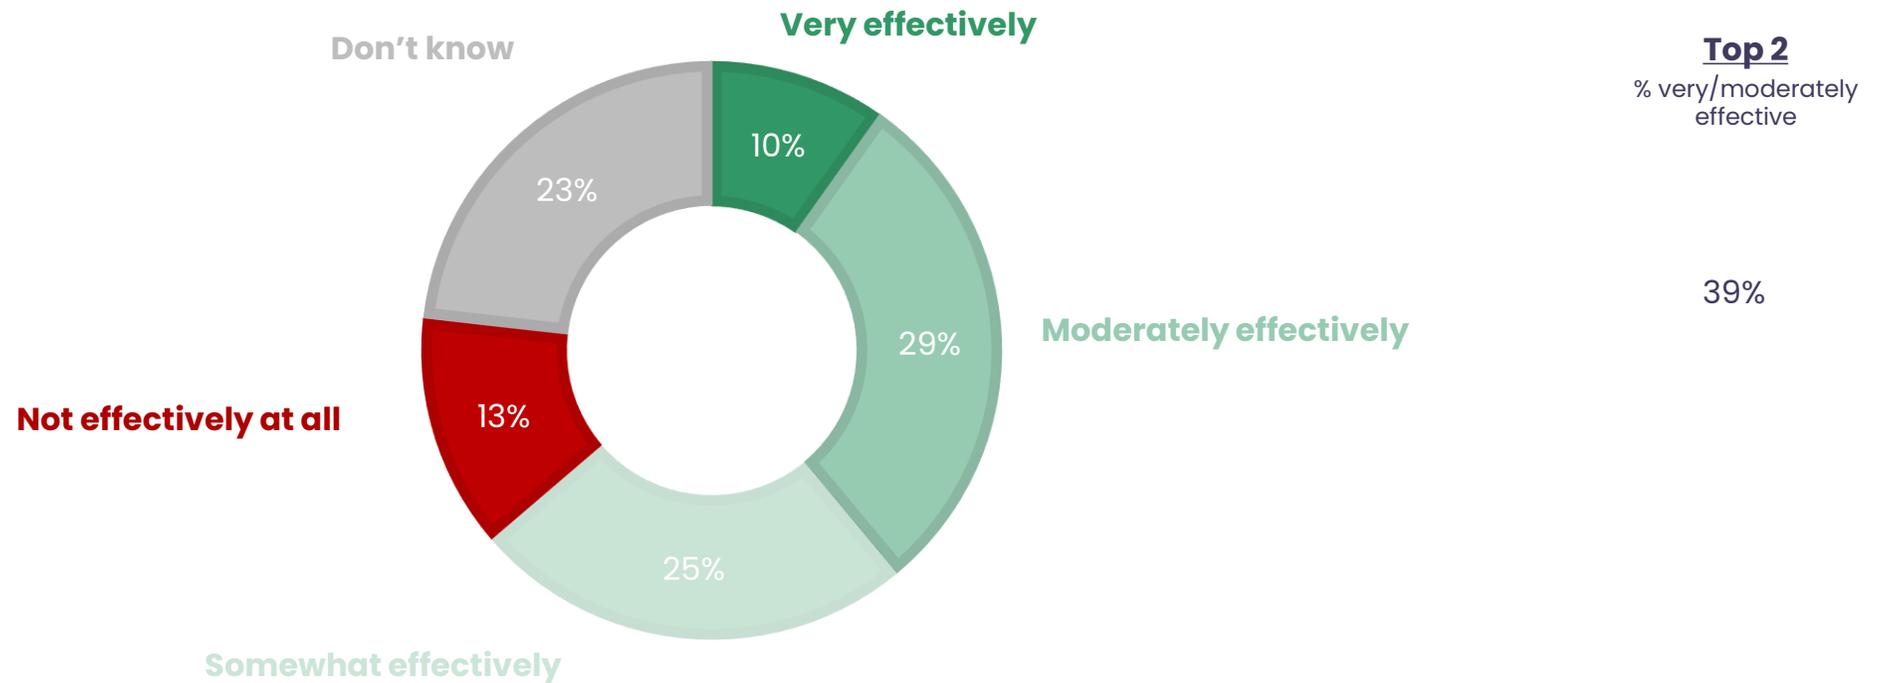

Base: total sample (n=7 013)

2.4 Public opinion on legislation

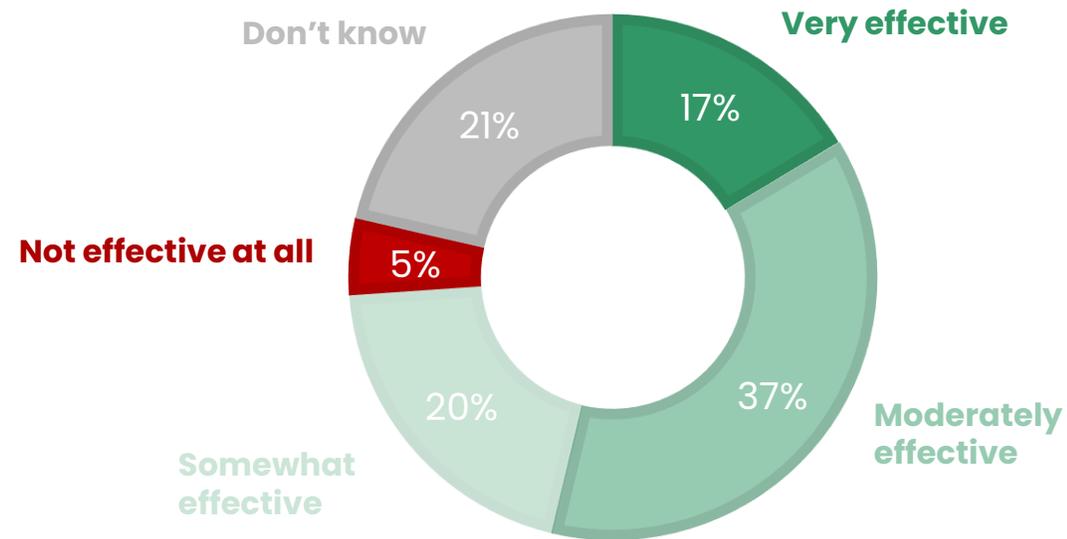

Do citizens believe that their **legislation are effective** in protecting the ocean and marine ecosystems?

"Q: In your opinion, does the legislation in your country effectively protect the ocean and marine ecosystems?"

How effective do the citizens believe that MPAs are?

"Q: How effective do you think Marine Protected Areas are in your country? "

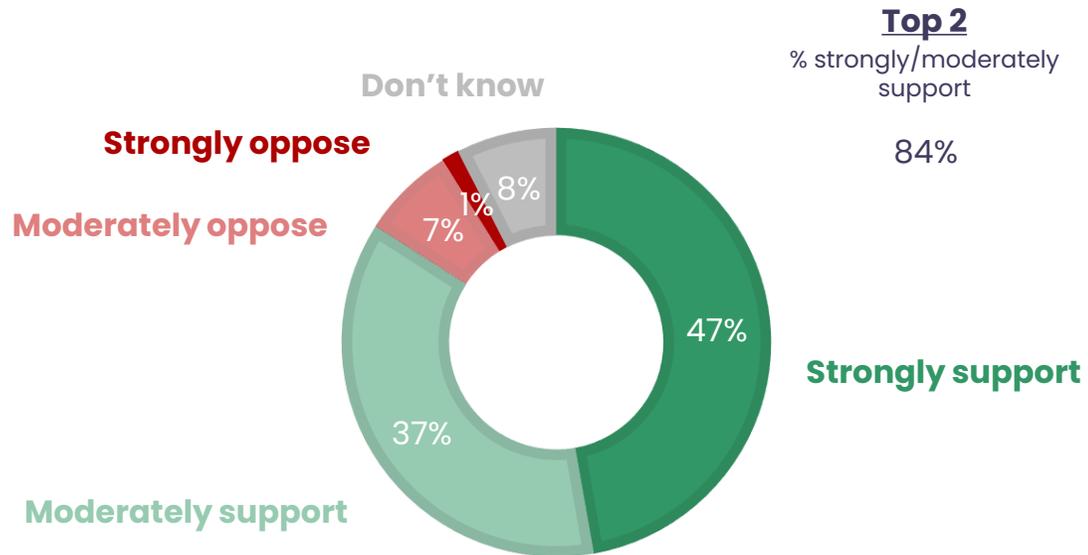

Top 2
% very/moderately effective

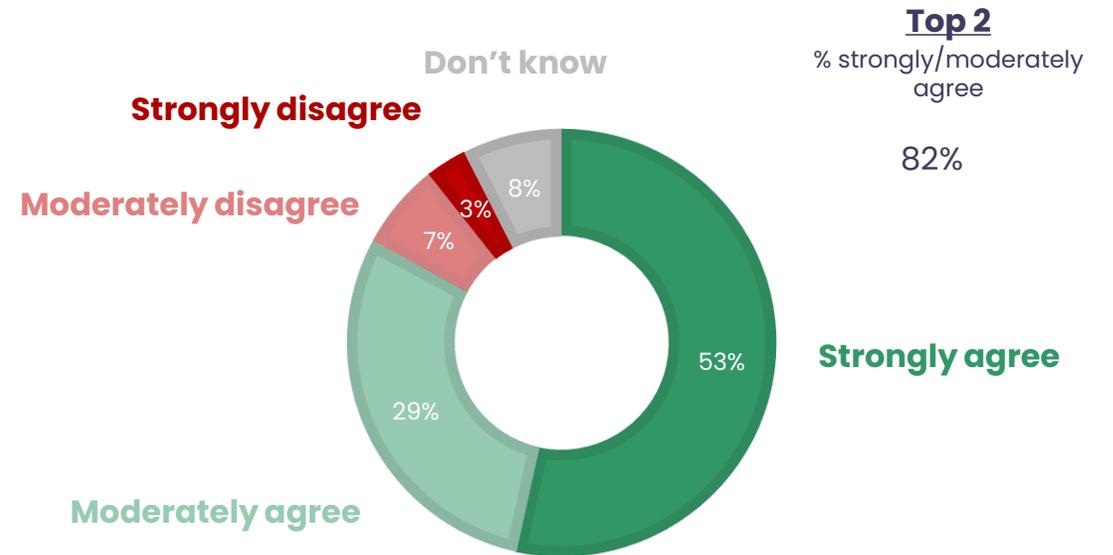

54%

Do the citizens oppose or support stricter legislation?

"Q: Would you support or oppose stricter legislation to protect Marine Protected Areas?"

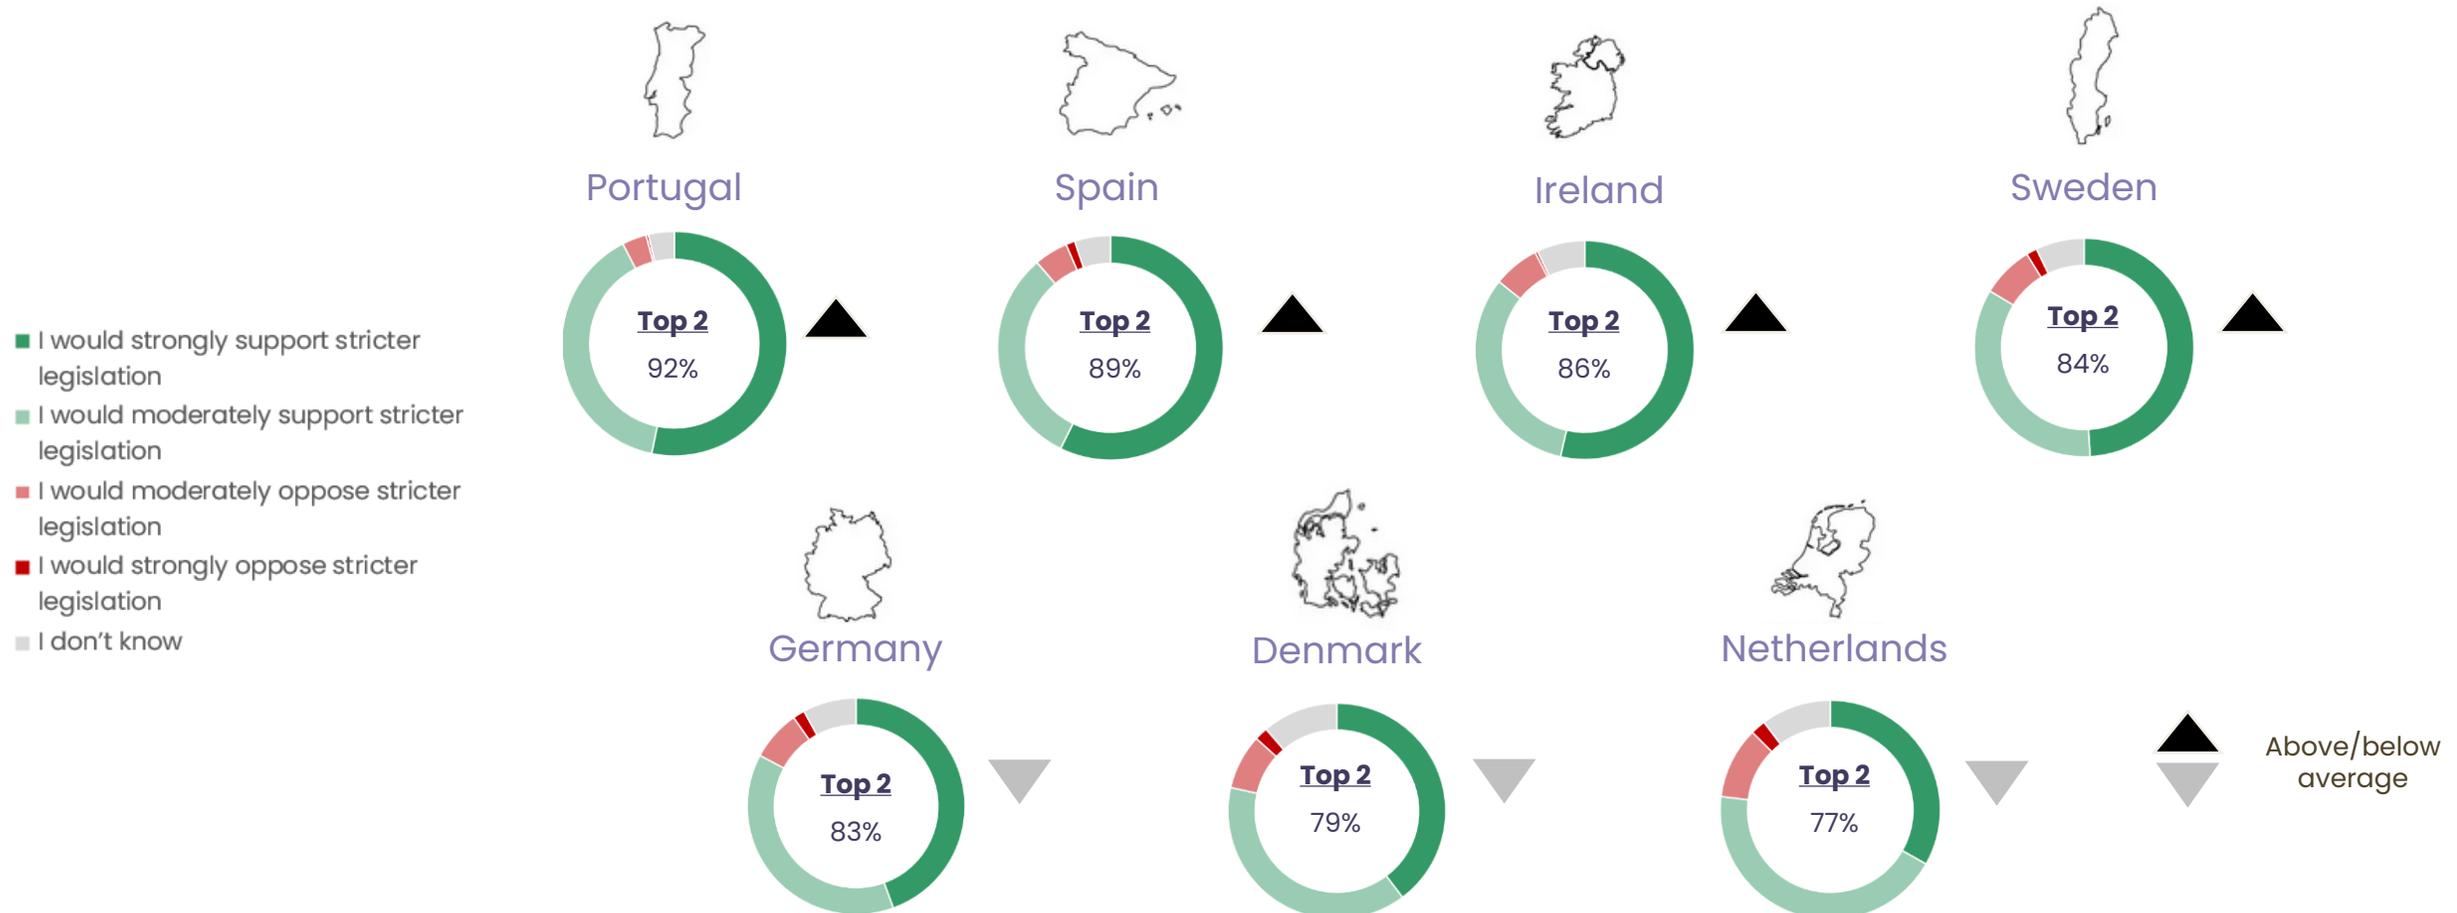

"Q: Do you believe that bottom trawling should be more strictly regulated?"

Do the citizens in the different countries support or oppose stricter legislation in favor of MPAs?

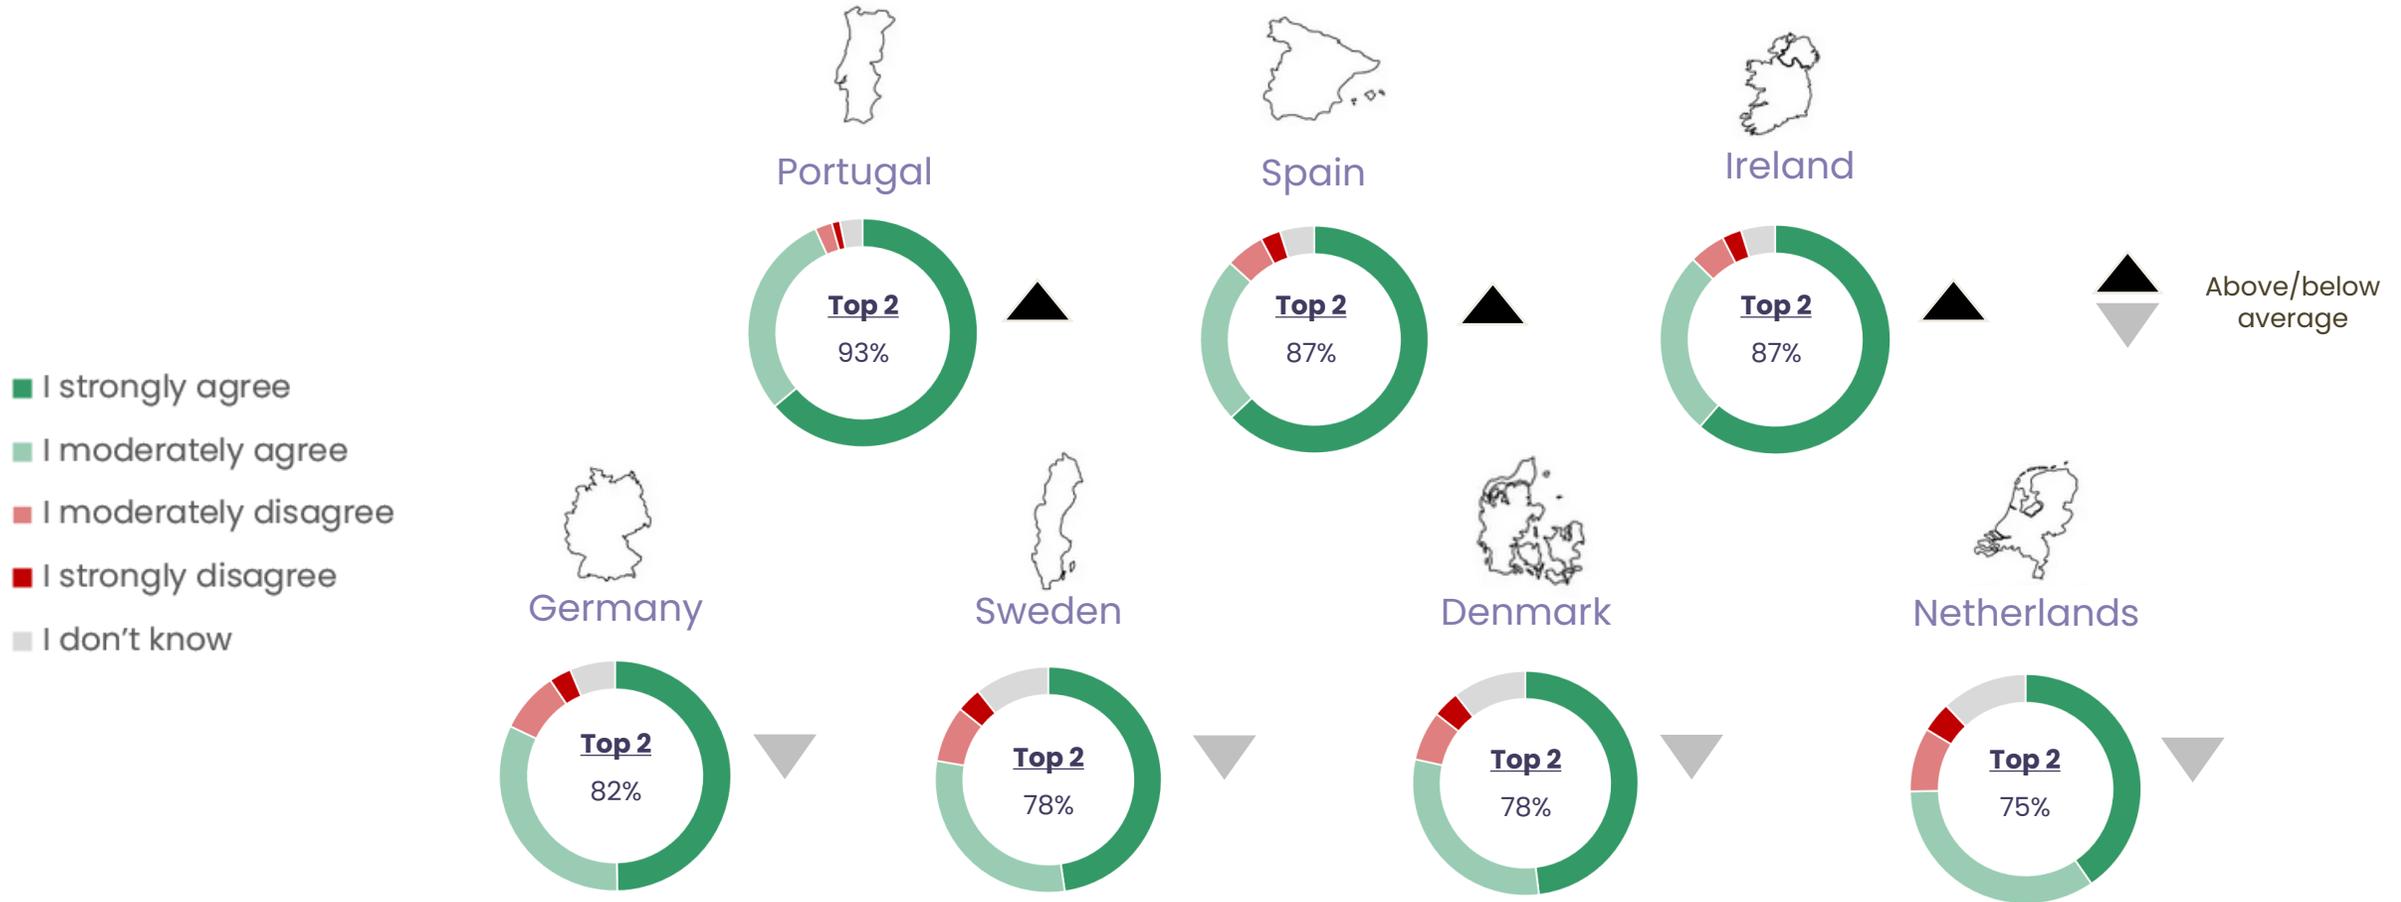

"Q: Would you support or oppose stricter legislation to protect Marine Protected Areas?"

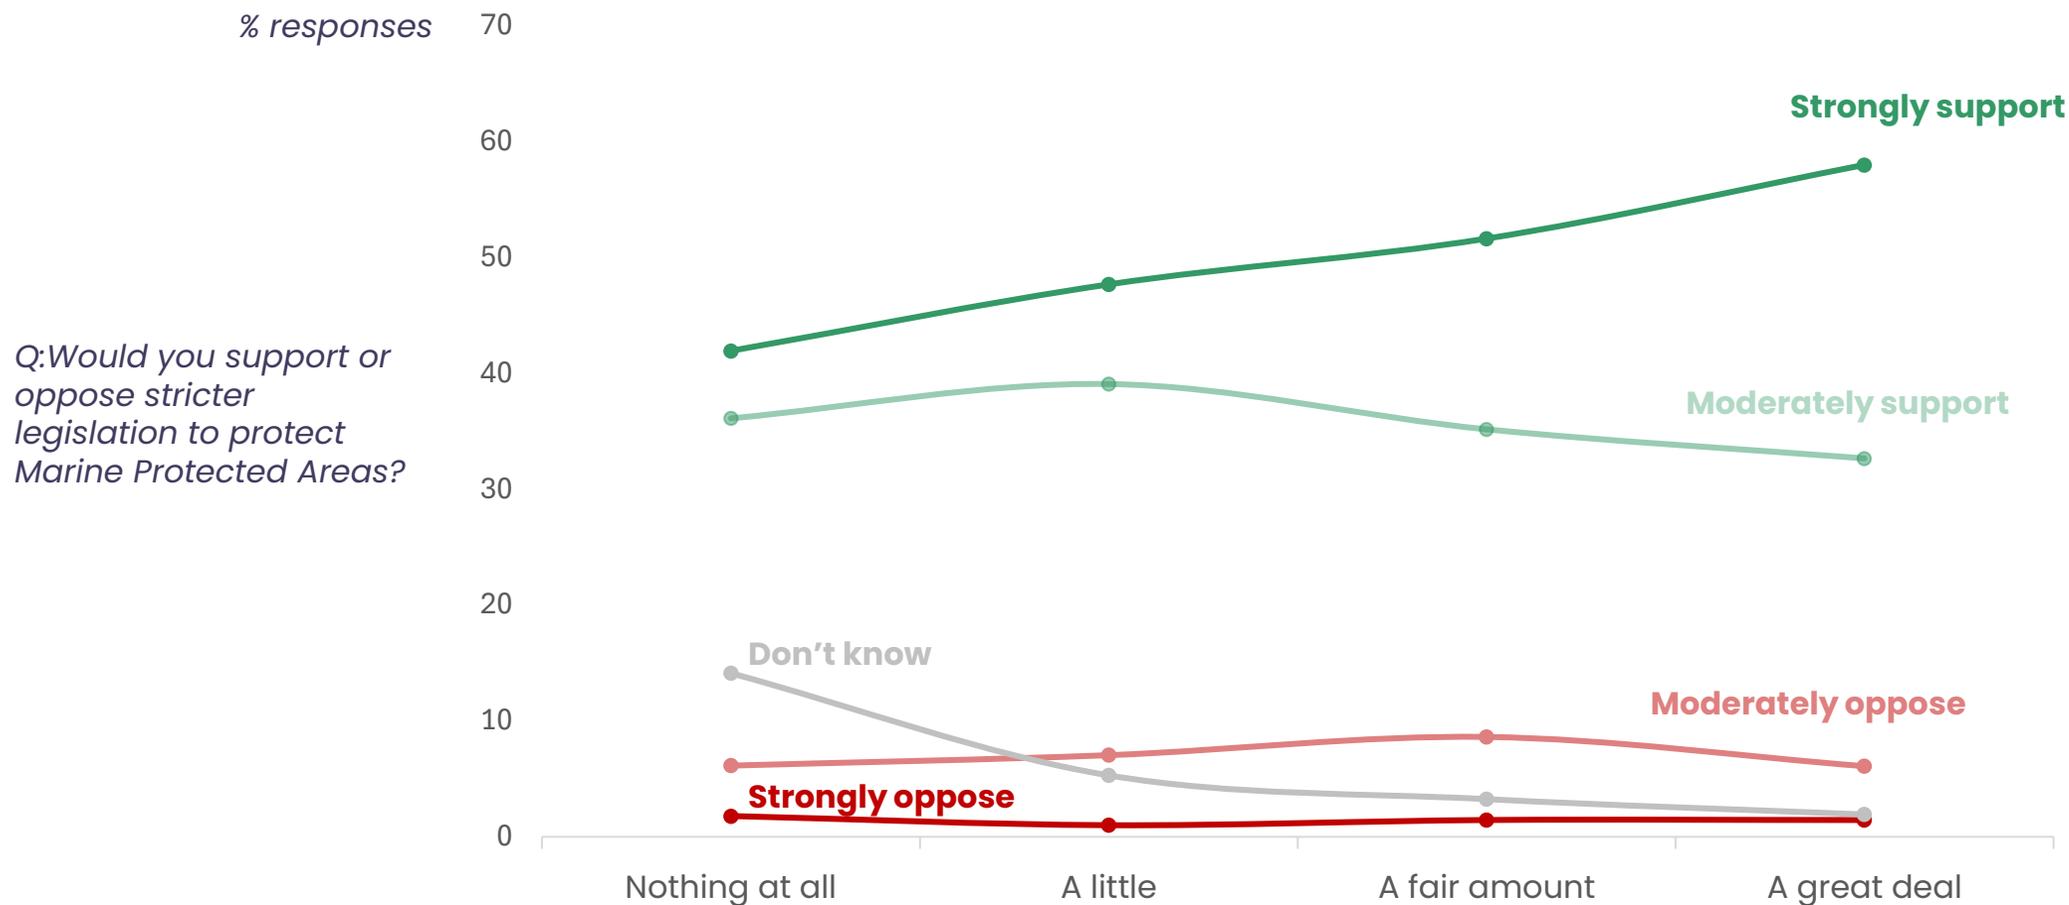

Base: total sample (n=7 013)

Do the citizens in the different countries believe in stricter regulations on bottom trawling?

"Q: Do you believe that bottom trawling should be more strictly regulated?"

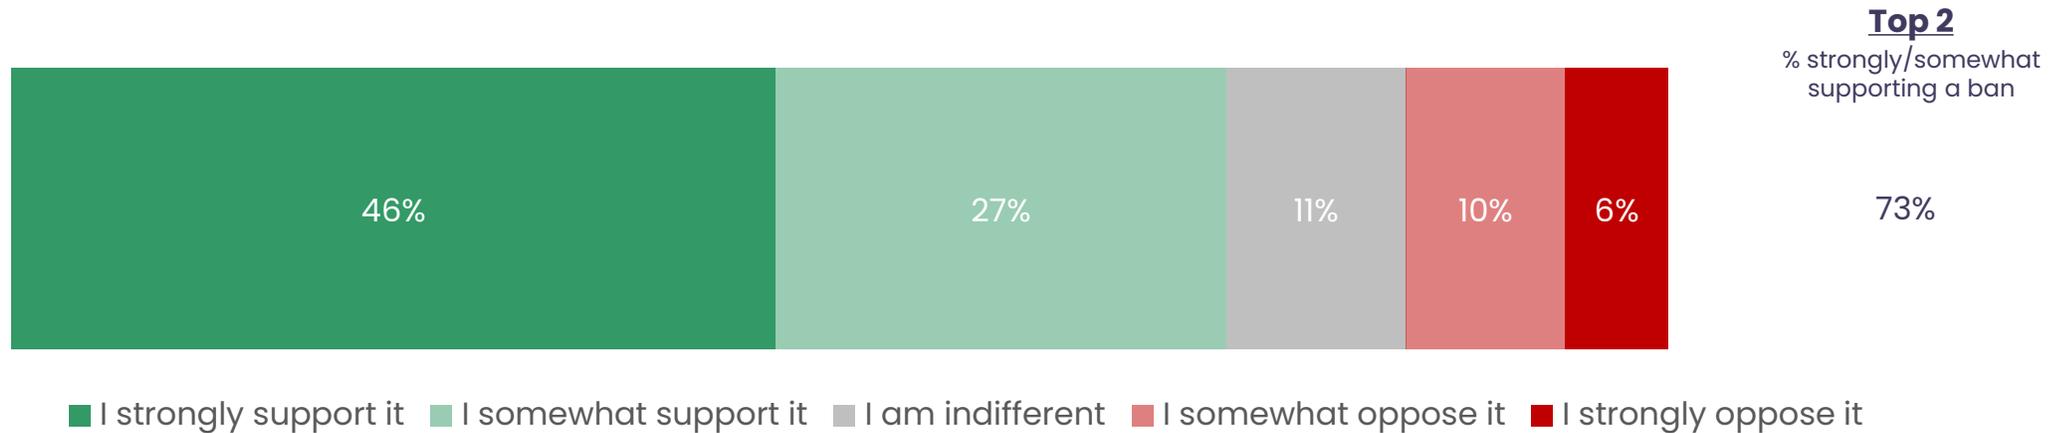

Greater knowledge of MPAs correlates with stronger support for stricter legislation regarding MPAs.

Q: How much, if anything, do you know about the Marine Protected Areas in your country?

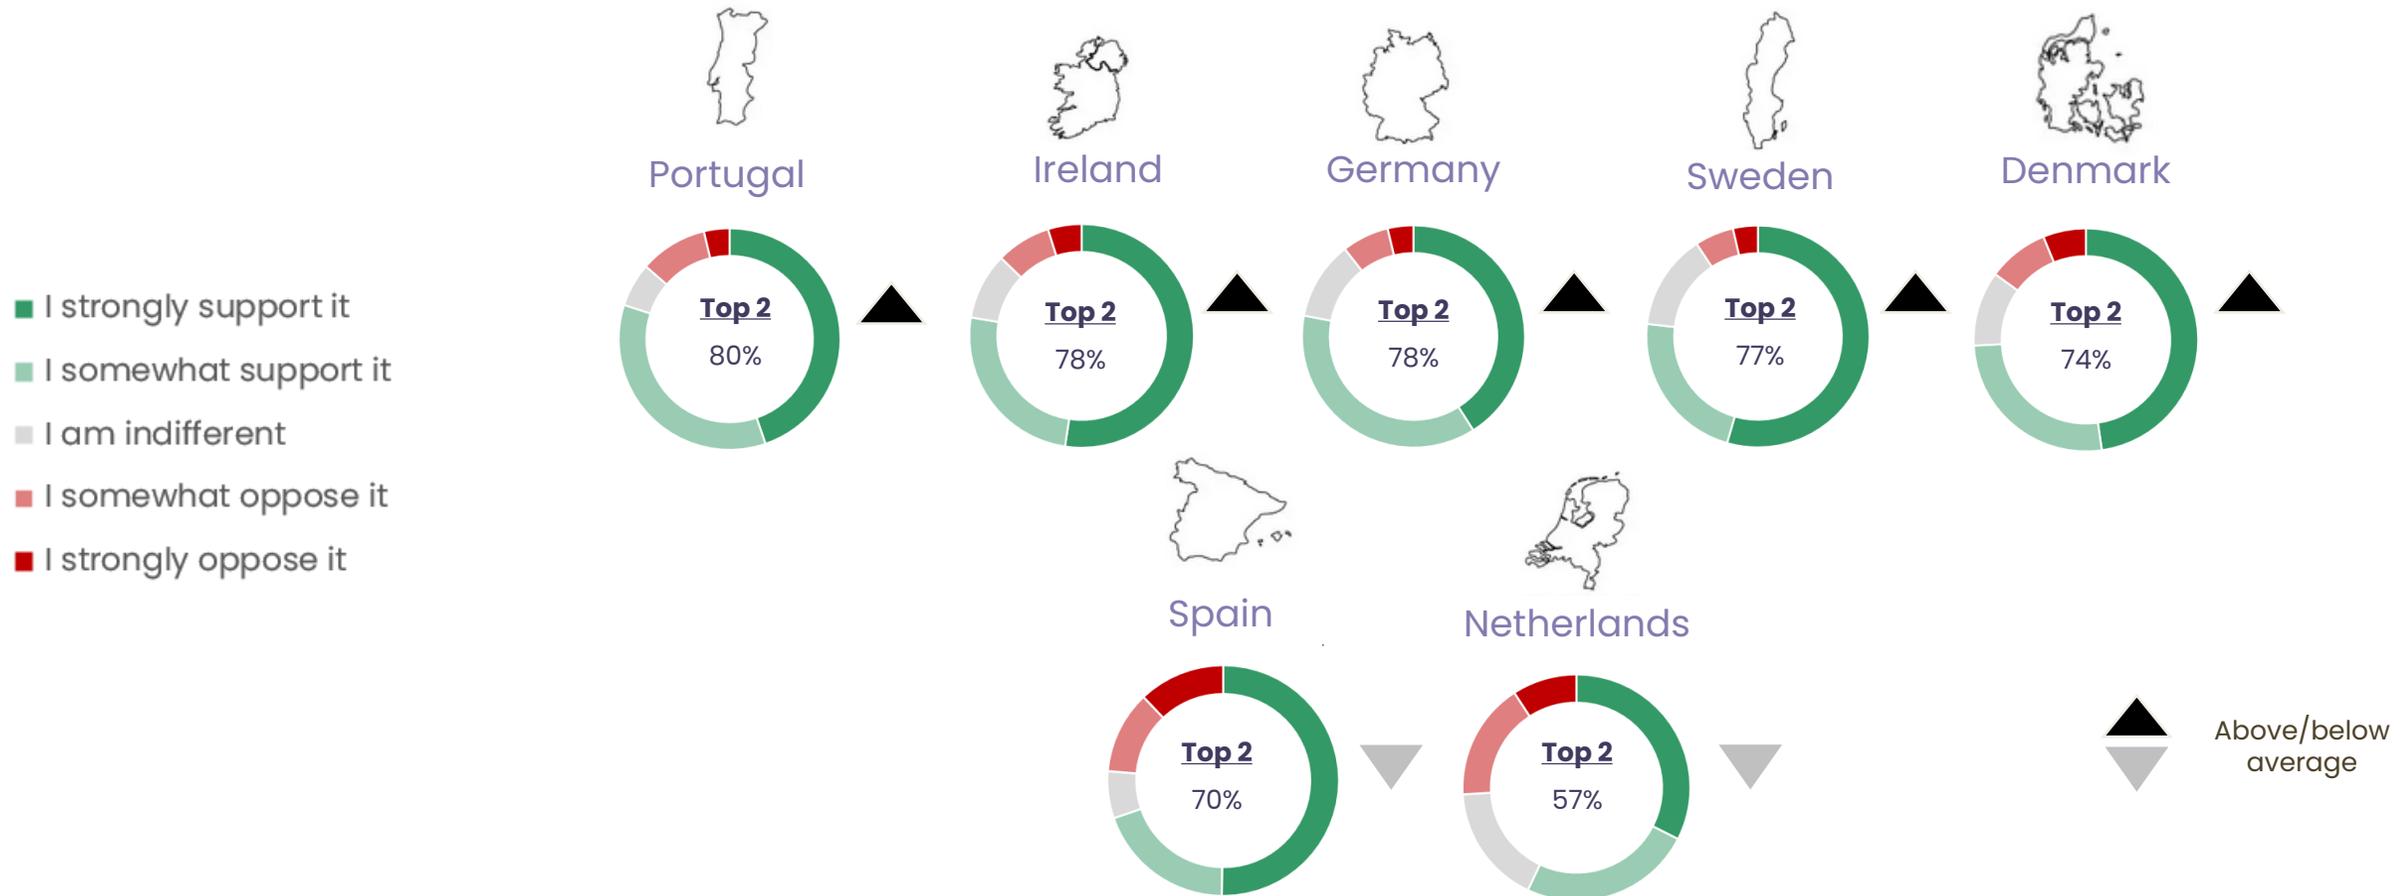

Do the citizens support or oppose a ban on bottom trawling in MPAs?

"Q: Would you support or oppose a ban of bottom trawling in Marine Protected Areas in your country?"

Do citizens in different countries support or oppose a ban on bottom trawling in MPAs?

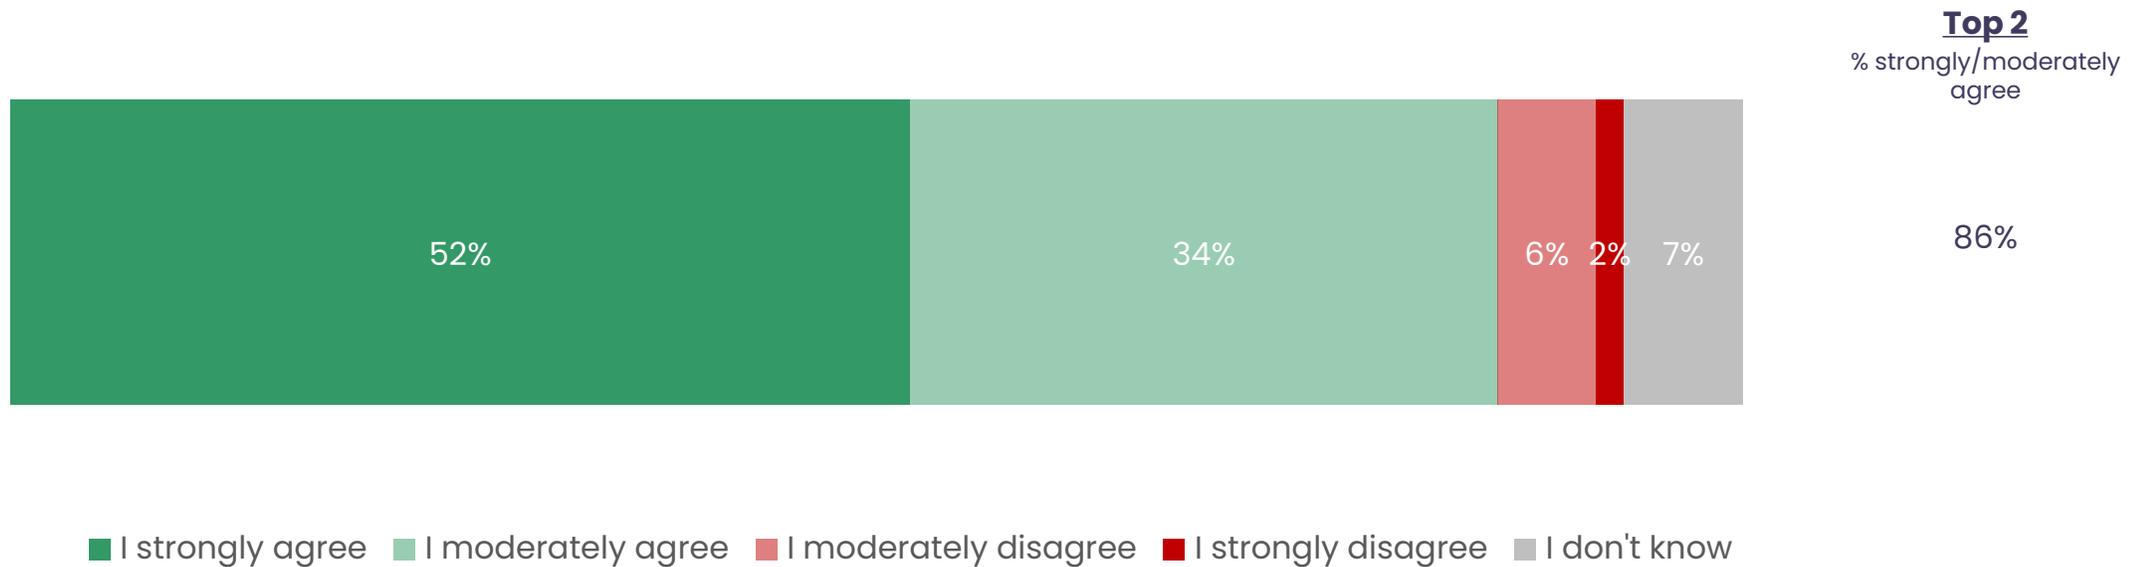

"Q: Would you support or oppose a ban of bottom trawling in Marine Protected Areas in your country?"

Base: total sample (n=7 013)

Do citizens believe that the protection of marine biodiversity needs higher political priority?

"Q: Do you believe that political leaders should give higher priority to protect marine biodiversity?"

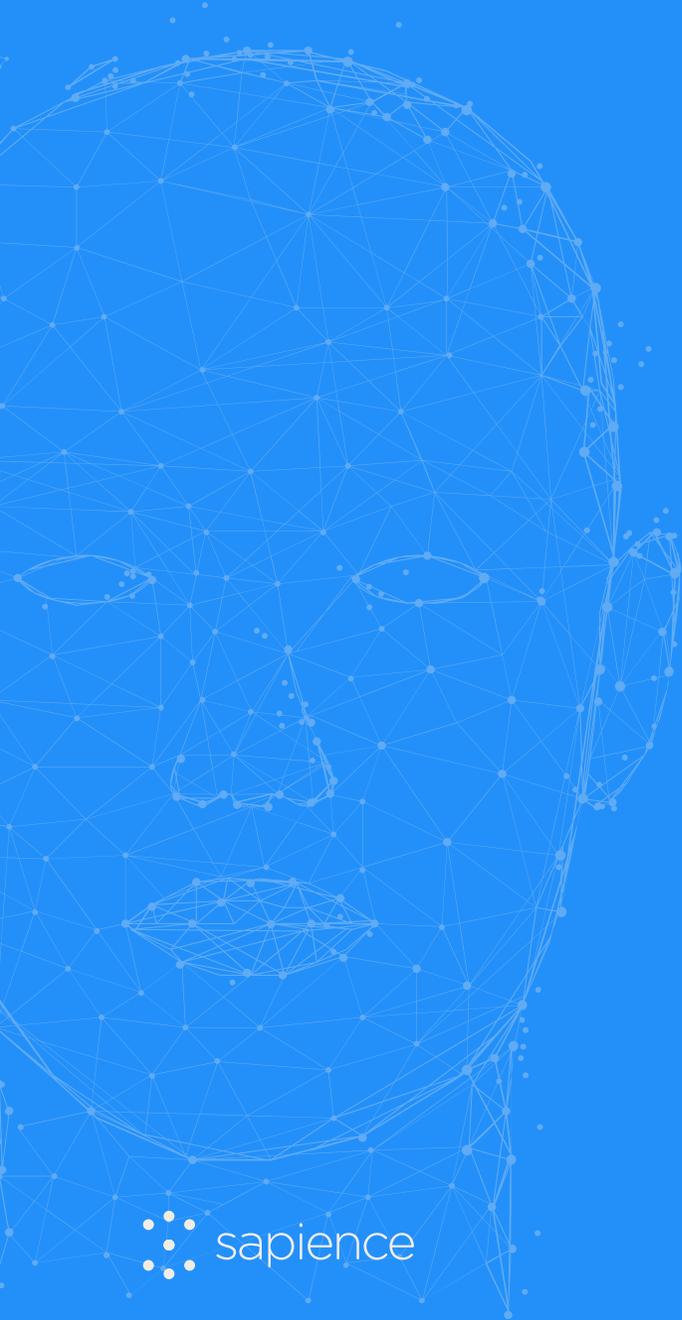

3. Conclusions

Conclusions

- The majority of citizens interviewed in the selected countries believe that protecting the ocean and marine ecosystems are very important. More than **9 out of 10 considering it essential or important** to protect endangered species, preserve ocean habitats, minimize pollution, reduce illegal fishing, and stop overfishing.
- The general level of knowledge about MPAs is relatively low, with only 1 out of 3 people being fully aware of their purpose. However, once informed about MPAs, the vast majority (**9 out of 10**) of **citizens believe MPAs are necessary** to protect marine biodiversity.
- Public opinion does not consider bottom trawling to be a sustainable fishing practice, with **3 out of 4 people expressing high or moderate concern** about its impact on the ocean and marine ecosystems.
- This sentiment drives a push for stricter legislation to protect the ocean and marine ecosystems. Overall, **3 out of 4 citizens would ban bottom trawling** in MPAs, and almost 9 out of 10 expect political leaders to prioritize the protection of marine biodiversity.
